

Consumer price index

4 □ 1988 Monthly

CONSUMER PRICE INDEX: Sharp increase for EUR 12 in April (+0.5%)

The CPI for the Community as a whole (EUR 12) rose by 0.5% between March and April 1988.

Although this increase appears to be a break in the sequence of moderate increases during the last months, it is not unusual for the month of April.

The United Kingdom for example recorded an increase of 1.6% compared with March, but as every year in April the index includes increases as announced in the Budget, e.g. higher taxes on alcoholic drinks, tobacco and petrol, as well as higher prices for electricity, gas, motor vehicles and mortgage rates.

In Greece price rose by 2.0% compared with March (April 1987: 2.3%).

In the other E.C. countries the rates increase vary from 0.0% in Luxembourg to 0.5% in France. The only country reporting a decrease is Spain (-0.3%).

The inflation rate over 12 months for EUR 12 (April 1988 compared with April 1987) is 2.7%, as against 3.9% for the USA and only 0.3% for Japan.

The rates for the individual Member States are as follows:

Below the EUR-12 average

Netherlands	0.8%
Germany	1.0%
Belgium	1.0%
Luxembourg	1.0%
Ireland	2.0%
France	2.5%

About the EUR-12 average

United Kingdom	3.9%
Spain	3.9%
Denmark	4.7%
Italy	5.1%
Portugal	7.9%
Greece	13.0%

METHODOLOGY

The consumer price indices given here are the national indices which have different names in each country. As far as trends are concerned, the general index published by EUROSTAT always corresponds to the general index published by the country. The component items of this general index are groups of national indices aggregated according to a harmonized classification conforming to the ESA (European System of Integrated Economic Accounts). For these groups, the price trends correspond to the trends noted by the national indices for the same classification field.

The field covered by the general index varies according to country: as regards the population concerned (specific income bracket, certain socio-professional categories or total households), the geographical areas used (capital, urban areas, country as a whole, etc.) or differences in treatment of expenditure on rent, health care, etc... Finally, there is no uniform method for seasonal adjustments.

A fixed base system is used in some countries, whereas in others a chain system is used (variable weightings). The reference years used at national level for the indices vary according to country. For ease of comparison, EUROSTAT has chosen 1980 as the common year for the presentation of these indices.

THE CALCULATION OF THE EUR-12 INDEX

The EUR-12 index as calculated by EUROSTAT is a weighted average of national price indices.

The weight used is the proportion of each country in the final consumption of households for EUR-12. The values of this consumption in national currency are converted into purchasing power standards (PPS); for this purpose the purchasing power parities of the G.D.P. are used.

Up to 1987 purchasing power parities are those which result from the 1980 enquiry, from 1988 onwards they are those from the 1985 enquiry. The index calculated is a chain index of the "Laspeyres" type with weights changing each year.

However, the weights are lagged by three years since the national accounts data needed become available only after three years.

For example: the weights used for 1988 are those of 1985, for 1987 those of 1984.

Moreover, national accounts data are often revised leading to revisions of the consumption weights. In order to avoid continuous modifications in the EUR-12 index for previous periods, EUROSTAT has decided to "Freeze" the weights which are used.

Thus the EUR-12 index will not be affected by revisions of the national accounts. However when Member States carry out major revisions in the price series for past years, EUR-12 data will be calculated using these new series.
